SECTION 7 –

Site Layout

7.1 General Provisions

- 7.1.1 The intent of these [landscaping](#) and screening regulations is to contribute to a reasonable standard of livability, aesthetic, and placement of the [landscaping](#), to provide for the masking and separating of various [land uses](#).

7.2 Landscaping Standards

Landscape Requirements

- 7.2.1 Landscaping shall follow the regulations within Table 7.2 to provide for the masking or separating of various land uses. See [Section 8.2.2](#) for parking restrictions within landscaping areas.

Table 7.2 – Tree & Landscaping Planting Requirements cm = centimetres / m = metres / m ² = square metres / m ³ = metres cubed	
Criteria	Regulations
Minimum Number of Trees ^{-1, -2}	(a) For Infill Housing : 1 tree per 10 linear metres of front lot line and flanking side lot line (b) For all other zones: 1 tree per 10 linear metres of front lot line , rear lot line , and flanking side lot line
Minimum Soft Landscaping Area ⁻³ See Visual Example Figure 7.2.1	75% of the landscape area shall be soft landscaping
Tree Location	Required trees must be planted on the subject property with at least one tree planted in the front yard landscape area and, if applicable, one tree in the flanking side lot line . Trees are not required to be located within the front yard landscape area and/or flanking side yard landscape area when: - the boulevard abutting the landscape area contains overhead electrical power lines that would interfere with the growth of the trees; or - the abutting boulevard is irrigated and contains trees and a sidewalk.
Minimum Landscape Requirements Within Surface Parking Lots	The following landscape requirements apply to surface parking lots with 15 or greater surface parking spaces that are not enclosed within a building: (a) If a surface parking lot abuts a street , a minimum 1.5 m landscaped setback is required;

	(b) landscaped islands are required at the end of each parking aisle. The maximum number of parking spaces in a consecutive row is 14 with a landscaped island or drive aisle separating the next 14 spaces; (c) a minimum of one tree must be included in each landscape island. The trees required within landscape islands is in addition to the minimum number of trees required on-site and cannot be double counted to meet minimum numbers; (d) landscaped islands are not to be longer than the adjacent parking space and shall be clearly delineated as separate and in addition to required parking and loading spaces; (e) locate landscaped islands such that loading and unloading vehicles can gain access without undue interference; (f) landscape islands must have a minimum 75% soft landscaping or soil cells.
FOOTNOTES (Section 7.2): ¹ The linear metre calculation is used to determine the minimum number of trees to be planted (not the minimum spacing). There is no minimum number of required trees in relation to lot lines where the setback to the principal building (and therefore the width of the associated landscape area) is 1.0 m or less. The minimum landscaping and number of trees is required for all developments, except, for residential developments that contains two or less dwelling units per lot. ² For Infill Housing, there is no minimum number of trees in relation to the front lot line and/or flanking side lot line if the boulevard abutting the front lot line and/or flanking side lot line contains trees and a sidewalk. ³ Electrical transformers and driveways within the landscape areas can be excluded from the minimum percentage of soft landscaping area. If soil cells are installed for all the required trees in the front yard or flanking yard landscape area, then there is no minimum soft landscaping requirement.	

Landscape Standards

- 7.2.2 All required landscaping and installations including irrigation requirements shall meet or exceed the Canadian Landscape Standard (CLS) as jointly published by the Canadian Society of Landscape Architects and the Canadian Nursery Landscape Association and the landscape standards within Table 7.2.2.

All columnar trees shall be considered a medium or small tree for determination of the tree size ratio. These columnar trees require the equivalent large tree soil volume. All trees onsite including the trees within the landscape area and the trees within parking lot landscape islands must meet this ratio. •⁴ Measurements to be taken from the trunk or centre of a multi-stemmed plant. •⁵ Existing coniferous trees may be located within 5 m of a new building or structure, subject to the recommendations of a qualified professional.

- 7.2.3 All required **landscape areas** and installations shall be regularly maintained by property **owners** to meet the Canadian Landscape Standard as appropriate to the site to maintain vegetation health.
- 7.2.4 All required setback areas shall be landscaped with various tree species in accordance with **Table 7.2** to provide for the masking or separating of various land uses. The minimum number of trees is identified within **Table 7.2**. In addition to **Table 7.2** and to provide appropriate masking and separating of various land uses, the following must also be adhered to:
- properties adjacent to ALR land must meet **landscaping** standards as outlined in the Farm Protection DP Guidelines as outlined in the **City of Kelowna’s Official Community Plan**.
 - properties zoned A1 and A2 must meet **landscaping** standards as outlined in the Farm Protection DP Guidelines as outlined in the **City of Kelowna’s Official Community Plan**.

- 7.2.5 Notwithstanding any other provisions in this Bylaw, wherever Environmentally Sensitive Areas (as defined in the OCP) or Natural Hazard Areas (as defined in the OCP) are located, then the land and vegetation shall remain undisturbed or be restored (as described in the OCP). Riparian Management Areas (as defined by the OCP) must remain in its natural condition or be restored in a manner that either enhances conditions for fish and wildlife or maintains conditions equivalent to those that would have existed had no development occurred.
- 7.2.6 All construction on-site must occur concurrently with erosion control and protection measures to prevent the pollution, degradation, or siltation of natural areas, including vegetation and water courses. This includes the provision of temporary fencing prior to and during construction.

- 7.2.8 All [landscape areas](#) shall be watered by a fully automatic irrigation system. No run-off onto sidewalks, [streets](#), or parking areas shall be permitted. The following areas are exempt from having permanent fully automatic irrigation systems:
- existing areas of undisturbed native vegetation which have been accepted as landscape area or [Riparian Management Area](#);
 - [landscape areas](#) specifically designed as xeriscape or drought resistant natural species plantings; however, temporary irrigation may be required;
- 7.2.9 Where the retention of trees is required or permitted, a letter from a qualified professional, such as a certified arborist or Landscape Architect, shall be submitted, indicating the mitigation measures required during and after the construction to ensure the health of the vegetation.

7.3 Refuse and Recycling Bins

Private Collection

- 7.3.1 All refuse and recycling bins (including all other large receptacles used for the temporary storage of materials) that are placed above [natural grade](#) (in zones other than agricultural zones) shall be located within a building or be screened from adjacent lots and streets. The following requirements shall be adhered to:
- All required screening shall be opaque with a minimum height of 1.3 metres and a maximum height that is equivalent to the height of the refuse or recycling bin.
 - All refuse or recycling bins shall be setback a minimum of 3.0 metres from any [lot line abutting a rural residential, single & two dwelling, or multi-dwelling zone](#).
 - An unobstructed access with a minimum width of 3.0 metres and a minimum vertical [clearance](#) of 4.6 m shall be provided to access to a required garbage and recycling room or enclosure.

SECTION 8 –

Parking and Loading

8.1 General Provisions and Development Standards

- 8.1.1 Where provision of off-street parking or [loading spaces](#) is required by this Bylaw, a plan of the proposed site layout and landscape plan shall be included with the development permit application or [building permit](#), as the case may be. The plans must be included with the [building permit](#) application. The site plan must be drawn to scale and must clearly illustrate the [lot](#) size and configuration, [building](#) locations, [parking spaces](#), [loading spaces](#), on-site circulation, access driveways, [landscaping](#), [fences](#), and any other details relevant to the review of the [development](#) proposal.
- 8.1.2 Off-street [parking spaces](#) shall not be credited as off-street [loading spaces](#) or vice versa.
- 8.1.3 Every off-street parking or [loading](#) area (including every access road to such areas) required by this Bylaw to accommodate three (3) or more vehicles:
- (a) shall have a durable, dust-free hard surface of concrete, asphalt, or similar material, constructed such that the surface drainage is directed to the public storm sewer system (if available), or alternatively to approved planting areas, or an approved on-site drainage system;
 - (b) despite Section 8.1.3(a), any requirement for hard surfacing such as concrete or asphalt does not apply (but [dust free surface](#) shall be required) to agricultural zones, public parks, or [open space](#) uses;
 - (c) shall clearly delineate individual [parking spaces](#), [loading spaces](#), spaces for universal accessibility, maneuvering aisles, entrances, and exits with pavement markings, signs, and/or other physical means;
 - (d) shall be designed to allow forward entry to and exit from the [lot](#) on which the parking or [loading](#) area is located directly to a dedicated public [street](#) or [lane](#), without encumbering any lands other than the subject [lot](#). This provision does not apply where parking or [loading](#) can be provided and accessed directly from an abutting [lane](#). This provision does not apply to RU1, RU2, RU3, or MF1 zoned lots where access is from a local road or a road of a lesser standard as identified in the [City of Kelowna's Official Community Plan](#).
- 8.1.4 No required parking shall be provided parallel to and flanking a [lane](#) unless the parking area is accessible by a driveway and is screened from the [lane](#) by a physical barrier.
- 8.1.5 Landscaped islands and [parking lot](#) requirements shall be consistent with [Section 7](#).
- 8.1.6 Every off-street parking or [loading](#) area, and access thereto, shall have fencing, curbs, or secured wheel stops to prevent vehicles from encroaching upon [lot lines](#).
- 8.1.7 All off-street [parking spaces](#) on [lots](#) with five (5) or more [parking spaces](#) and abuts a pedestrian walkway or landscaped area without a barrier curb needs to have a wheel stop that is 0.9 metres from the walkway or [landscaping](#) area and minimum 0.15 metres in height as described in [Figure](#)

- 8.1.8 Where a wheel stop is provided pursuant to [Section 8.1.8](#) the portion of the [parking space](#) between the wheel stop and the front edge of the [parking space](#), as marked in [Figure 8.1.8](#), is exempt from the requirements of [Section 8.1.3](#) and may be surfaced with permeable material or [landscaping](#), provided that no [landscaping](#) exceeds 0.15 metres in height.
- 8.1.9 Every off-street parking or [loading](#) area which is illuminated shall have all lighting positioned in such a manner that light falling onto [abutting](#) properties is minimized.
- 8.1.10 Any trash storage or collection area co-existing with any parking or [loading](#) area:
- shall be clearly delineated as separate and in addition to required parking and [loading spaces](#);
 - shall be located such that collection vehicles can gain access without undue interference with the operation of the parking and [loading](#) area; and

FOOTNOTES (Table 8.2.6.b):

^{.1} For the purpose of calculating the percentage of regular size vehicle parking spaces, "accessible parking spaces" shall be included in the minimum number regular size vehicle parking spaces.

^{.2} All visitor parking spaces must be regular size vehicle parking spaces.

^{.3} All parking spaces that are configured in tandem must be regular size vehicle parking space.

^{.4} All parking spaces must be regular size vehicle parking space when: the length of a parking space abuts a doorway or when a surface parking space abuts a lane perpendicularly.

^{.5} For any MF1 development with two dwelling units or less, the minimum regular size vehicle parking spaces for the principal dwelling units is 100%.

8.2.7 Length, width, and height measurements shall be clear of obstructions (including but not limited to columns, lot lines, curbs, walls, pipes, roof features, fences, and emergency exit painted areas). Spacing measurements shall be taken from the inside to inside of obstructions.

8.2.8 Where a parking space abuts an obstruction (including but not limited to columns, lot lines, walls, pipes, roof features, fences, and emergency exit painted areas) the parking space width shall follow the following regulations:

- be an additional 0.2 metres wider where the parking space abuts an obstruction on one side;
- be an additional 0.5 metres wider where the parking space abuts an obstruction on both sides; and
- be an additional 0.8 metres wider where the parking space abuts a doorway.

8.2.9 At the end of a parking aisle the parking spaces abutting each other in a perpendicular manner cannot both be small parking spaces as described in Figure 8.2.9.1.

Number of Spaces

8.2.10 The minimum number of off-street vehicle parking spaces, loading spaces, short-term bicycle parking and long-term bicycle parking spaces required for each use (including visitor spaces) is specified in Table 8.3, Table 8.3.1, Table 8.3.2, Table 8.3.3, Table 8.3.4, Table 8.3.5, and Table 8.3.6 except where additional parking is required by the Ministry of Transportation & Transit (MOTT) if the site has direct access to a provincial highway. The maximum required number of loading spaces is three (3) spaces.

- 8.2.11 **Parking spaces** for secondary uses shall be provided in addition to the required **parking spaces** for the **principal use** on a **lot**.
- 8.2.12 Where calculation of the total number of **parking spaces**, loading spaces, or bicycle spaces yields a fractional number:
- any fraction less than one-half (0.5) rounds down to the nearest whole integer (including zero); and
 - any fraction one-half (0.5) or greater rounds up to the nearest whole integer.
- 8.2.13 Where **Table 8.3**, **Table 8.3.1**, **Table 8.3.2**, **Table 8.3.3**, **Table 8.3.4**, **Table 8.3.5**, and **Table 8.3.6** does not clearly define requirements for a **development**, the single use class or combination of use classes most representative of the proposed **development** shall be used to determine the parking requirements.
- 8.2.14 Where a **development** consists of a mix of use classes, the total off-street parking requirement shall be the sum of the off-street parking requirements for each **use** class.
- notwithstanding Section 8.2.13, in mixed-use **developments** the **parking spaces** required for **offices** and other **commercial related land uses** can be shared with the residential visitor parking requirements. **Parking spaces** must be available for both land uses (commercial and visitor) at all times.

Transportation Demand Management Bonus Parking Reductions

- 8.2.15 The minimum number of off-street vehicles **parking spaces** required for each **use** may be reduced as per the following incentives identified below. The following conditions must be met to qualify for the parking incentives outlined in Table 8.2.15 :
- Transit and Car-Share Incentives** - If a **development** with 25 or more residential **dwelling units** provides **both** Transit Passes and Car-Share Memberships to the residents then the following incentives apply as described in **Table 8.2.15 Parking Incentives**. A Car-Share membership must be for a traditional car-share organization in which the vehicle is returned to the same location at the end of every booking and not for one-way car-share organization. The car-share membership must be connected to the **dwelling unit**. The funds for Transit Passes must go into the EcoPass for New Developments program in which participants enrolled in the program will have unlimited access to the transit fund for use on the Kelowna Regional Transit System until the fund is extinguished. The rates for the Transit Pass Fund and Car-Share Memberships are:
 - 1 Car-Share membership per **dwelling unit**; and
 - \$1,500 per **dwelling unit** for Transit Passes into the EcoPass for New Developments program.
 - Rental Housing Incentives** - If a **development** with 7 or more residential **dwelling units** rezones to a rental sub-zone guaranteeing the **development** as rental housing then the following incentives apply as described in **Table 8.2.15 Parking Incentives**.

Accessible Parking Standards

8.2.16 The minimum accessible parking shall be provided as a function of the total number of parking spaces provided onsite as described in Table 8.2.17 and illustrated in Figure 8.2.16. However, if a development is within a Transit Oriented Area as identified in Map 8.3.a, Map 8.3.b, Map 8.3.c, or Map 8.3.d and utilizes the parking exemption to provide less parking than would otherwise be required by Table 8.3 Required Off-Street Parking Requirements then development must provide at least the minimum required amount of Accessible Parking spaces onsite as identified in Table 8.2.17a Required Amount of Accessible Parking Spaces in Transit Oriented Areas.

- (a) if one or more visitor parking spaces are required, then at least one of those visitor parking spaces shall be configured as an accessible parking space;
- (b) designate as an accessible parking space using appropriate signage;
- (c) include accessible parking spaces in the calculation of the applicable minimum parking requirement; and
- (d) accessible parking spaces shall be located as close to a main building entrance, on a level non-skid surface.

Table 8.2.16 Amount of Accessible Parking Spaces		
Total Number of Parking Spaces Onsite.	Min. Number of Required Accessible Parking Spaces ^{.2}	Min. Number of Required Van-Accessible Parking Spaces ^{.1}

FOOTNOTES (Table 8.2.16):

^{.1} The number of van-accessible parking spaces is included in the minimum required accessible parking spaces. For example: if six (6) accessible parking spaces are required and two (2) van accessible parking spaces are required, then the total number of accessible parking spaces is six (6), two (2) of which must be van accessible.

^{.2} There is no accessible parking space required for any lot zoned RU1, RU2, RU3, RU5, or MF1.

Electric Vehicle Charging

- 8.2.17 Any development with residential **dwelling units** that provides an on-site parking **spaces** for that **dwelling unit** must be an electric vehicle energized outlet capable of providing **level 2 charging**. The rate shall be one energized **space** per **dwelling unit** that is provided a parking stall. For example, if a development does not provide a parking space onsite for that **dwelling unit** then there is no requirement for an electric vehicle energized outlet for that **dwelling unit**.
- The minimum energized electric vehicle energized outlets do not apply to the visitor parking.
 - Energized Outlets must be labelled for their intended use for electric vehicle charging only.
 - Energized Outlets must be assigned to an individual vehicle parking space and must be located no further than 1.0 metre from that parking space.
 - No more than one Energized Outlet may be assigned to an individual vehicle parking space.
 - The minimum energized electric vehicle energized outlets do not apply to secondary suites or carriage houses.
 - The minimum amount of electric vehicle energized outlets per parking space capable of providing **level 2 charging** can be reduced by 75% if the lot is zoned with a “r – rental only” sub-zone that restricts the **dwelling units** to a rental only tenure and prohibits any building stratification or bareland stratification.

FOOTNOTES (Table 8.3):							
^{.1} Visitor parking is to be easily accessible to the access points of the corresponding development and/or buildings. Visitor parking is a separate minimum parking requirement that rounds up or down independent of the basic parking requirement.							
^{.2} Regardless of the parking rate (spaces per unit). The minimum number of dwelling units when the first visitor parking space is required is seven (7) dwelling units. For example, a lot with six (6) dwelling units does not require a visitor parking space.							
^{.3} All lots in the areas identified as 3 storeys in Map 4.1 within the OCP (UC1 Downtown) shall not be required to meet any vehicle parking space requirements if the height of the buildings on the lot are 4 storeys or less and 15.0 metres or less.							
^{.4} Lots in a Transit Oriented Area (identified in Map 8.3.a, Map 8.3.b, Map 8.3.c, or Map 8.3.d) have no minimum residential parking requirement. However, there is a minimum number of accessible parking spaces required in all new developments (See Section 8.2.17 Accessible Parking Standards).							
^{.5} These are the minimum parking rates for all residential development unless the location or type of residential development is outlined within Table 8.3.1.

The minimum long-term or short-term bicycle parking also does not apply for any Townhouses & Stacked Townhouses exclusive development in which each dwelling unit contains a private garage.							
^{.10} The vehicle parking rate for student residences is 0.15 parking spaces per dwelling unit. For lots that are not within a frequent or not within medium transit area, the student residences parking rate only applies within the University South Village Centre area as defined by the City's OCP.							
^{.11} The vehicle visitor parking rate for student residences is .05 parking spaces per dwelling unit.							
^{.12} The minimum transit passes may be waived if the development meets the minimum vehicle parking space, minimum visitor vehicle parking space, and minimum long-term bicycle parking spaces rates for a Frequent Transit Lot within an Urban Centre.							
^{.13} The minimum loading spaces only applies to apartment buildings with 25 or more dwelling units. The minimum loading spaces also only applies when on-street parking is not available along the frontage of the subject property or where the closest fronting on-street parking space is over 50 metres away (while not crossing a street) from the main residential lobby door. The purpose of residential loading spaces is to facilitate move ins / outs and to facilitate short term parking for deliveries and drop offs, thus the loading space should not be located behind a gated secured area and should be located close to the residential lobby entrance.							
^{.14} The funds for Transit Passes must go into the EcoPass for New Developments program in which participants enrolled in the program will have unlimited access to the transit fund, receiving either a Single Ride or DayPASS in real time when they board the bus, until the fund is extinguished.

FOOTNOTES (Table 8.3.1):				
^{.1} Visitor parking is to be easily accessible to the access points of the corresponding development and/or buildings. Visitor parking is a separate minimum parking requirement that rounds up or down independent of the basic parking requirement.				
^{.2} Regardless of the parking rate (spaces per unit). The minimum number of dwelling units when the first visitor parking space is required is seven (7) dwelling units. For example, a lot with six (6) dwelling units does not require a visitor parking space.				
^{.3} Lots in a Transit Oriented Area (identified in Map 8.3.a, Map 8.3.b, Map 8.3.c, or Map 8.3.d) have no minimum residential parking requirement. However, there is a minimum number of accessible parking spaces required in all new developments (See Section 8.2.17 Accessible Parking Standards).				
^{.4} This only applies to buildings with 7 or more dwelling units.

8.4 Off-Street Bicycle Parking

8.4.1 Short-term bicycle parking standards:

- short-term bicycle parking** must be conveniently located within: 15 metres of any main entrances (whether inside or outside of the **building**), a well-lit area, clearly visible to visitors, and subject to casual surveillance by occupants of the **building(s)**.
- short-term bicycle parking** spaces shall be provided in a bicycle rack that is permanently anchored to the ground or a wall.
- design and install **short-term bicycle parking** to the minimum dimensions shown in **Table 8.5.1 Minimum Dimensions for Bicycle Parking** and illustrated in **Figure 8.5.1**.
- short-term bicycle parking** may occur on the abutting boulevard (subject to municipal approval and engineering space considerations).

8.4.2 Long-term bicycle parking standards:

- All **long-term bicycle parking** must be located inside a **building** or within a secure, weather-protected, dedicated bicycle parking facility accessible to residents, employees, or other identified users of the **building**. For **Apartment Buildings** the **long-term bicycle parking** within a building shall be within a bicycle room or on bicycle racks in front of an automobile stall within the parkade. A bicycle room can be enclosed by walls and door or a bicycle room can include a bicycle compound within the parkade with metal mesh that extends from floor to ceiling. These bicycle compounds shall have reinforced steel bars spaced throughout the mesh, include tamper-proof or concealed bolts or nuts, and consists of industrial grade chain-link material (no.7 gauge or heavier).
- the entry door into the **long-term bicycle parking** facility must have a minimum width of 0.9 metres.
- A bicycle room shall be designed to accommodate a maximum of 40 bicycles, except this number does not include individual bicycle lockers. The number can increase to 120 bicycles if the room is compartmentalized using expanded metal mesh with lockable industrial-grade doors into enclosures containing a maximum of 40 bicycles. Each bicycle area containing up to 40 bicycles shall provide an access-controlled door. The access-controlled door will improve the bicycle parking security by limiting access to the area using a mechanism similar to an access code, keycard, non-duplicable key, or FOB.
- A bicycle room, compound, or lockers shall be located at-grade or within one **storey** of **finished grade**;
- The access route between the bicycle storage area and the exterior street level shall be easily accessible to users and the following shall apply:
 - If the access route contains a hallway then the minimum hall width is 1.5 metres.
 - If the access route contains any doors they must be power-operated doors including any exterior doors.

- c. The access route shall not traverse more than one storey above or on storey below [finished grade](#) unless an elevator designed to accommodate the loading and unloading of at least two bicycles is provided, offering direct, convenient access to the outside. Where an elevator is provided for bicycles, this elevator shall not be used for loading / unloading of commercial goods or for move in or move out activity associated with residential use.
- d. If the access route from the bicycle storage area to the exterior street level contains stairs then the stairs shall include a wheel ramp of a minimum width of 150 millimetres without cutting into the stair tread.
- (f) [long-term bicycle parking](#) spaces can be arranged in a ground-anchored or wall-mounted configuration provided that:
 - i. a minimum 50% of the required [long-term bicycle parking](#) shall be ground-anchored. Any bicycle rack system in which bicycles are suspended above the ground are not considered ground anchored.
 - ii. wall-mounted bicycle racks located in front of an automobile stall within a parkade will only be counted towards the minimum [long-term bicycle parking](#) if the automobile stall meets the minimum [regular - size vehicle standards](#). The maximum number of bicycles in front of an automobile stall within a parkade is 40 bicycles.
- (g) [long-term bicycle parking](#) spaces must have a minimum unobstructed height [clearance](#) of 1.9 metres between the floor and any mechanical equipment, or, if there is no mechanical equipment, between the floor and the ceiling.
- (h) design and install [long-term bicycle parking](#) spaces to the minimum dimensions shown in [Table 8.5.1 Minimum Dimensions for Bicycle Parking](#) and illustrated in [Figure 8.5.2](#).
- (i) For any residential development a "bicycle repair and wash station" is required after 20 [long-term bicycle parking](#) stalls are required. For any commercial or industrial development see [Section 8.6 End-of-Trip Facilities](#) for "bicycle repair and wash station". A "bicycle repair and wash station" includes tools for bikes, a commercial grade pump, access to water, and a way to raise a bike up to perform simple maintenance.

8.4.3 Bicycle racks shall be:

- (a) constructed of theft resistant material;
- (b) securely anchored with tamper-proof hardware to the floor, [building](#), or ground;
- (c) constructed to support from two points on the bicycle frame for a horizontal rack; and
- (d) constructed to enable the bicycle frame and at least one wheel to both be securely locked to the rack with a single U-style lock.

FOOTNOTES ([Section 13.5](#)):

¹ [Deleted]

² **Side yards** are not required for **semi-detached housing** or **townhouses** on a **lot line** that has a **party wall** agreement. For MF1 lots garages and carports can have a side yard setback of 1.2 metres when the lot has access to a rear or side lane. Any residential space on those MF1 lots above the garage or carport must meet the 1.8 m side yard setback.

³ The minimum setback only for portions of **commercial ground-oriented** units are 2.0 metres. The minimum setback can be reduced to 2.0 metres only for the of **ground-oriented** residential units if all of the following criteria are met:

- The maximum **height** of the first storey floor above the adjacent curb level for **ground-oriented** residential units are 1.2 m. **Height** is measured from the grade at the sidewalk directly from a fronting publicly accessible **street**, walkway, open space, or applicable **lot line**. See **example diagram Figure 5.12**.
- The minimum **net floor area** for **ground-oriented** residential units on the first floor is 11 m². See **example diagram Figure 5.13**.
- The abutting boulevard must have an installed sidewalk and irrigated landscape boulevard with street trees.

⁴ For portions of a parkade with **lane** access which do not project more than 2.3 metres above **finished grade**, the **rear yard** setback for the parkade is 1.5 metres.

⁵ The setback for a garage, a **carport**, or a parkade door that has direct access to the **street** shall have a 6 metres setback measured from back-of-curb or edge of road pavement, or edge of sidewalk to the building or 3.0 metres from **lot line** to the building (whichever is greater).

⁶ Minimum **building setbacks** only applies to buildings 5 **storeys** and taller with a building frontage greater than 60.0 m. The **setback** can occur on any floor above the first **storey**. The **setback** is required for 75% of the total area of the exterior wall along the building frontage. Eaves, **decks**, **canopies**, and **balconies** can project into the **setback** no greater than 0.6 meters

⁷ If the property is abutting a Rural – Agricultural and Resource, Rural – Residential, or Suburban – Residential future land use designation as defined in the **Official Community Plan** then a 1.5 metres additional setback needs to be added to the minimums.

⁸ **Common and private amenity space** can be devoted to child care centres as long as the child care spaces have direct access to open space and play areas within the lot. The amount of **common and private amenity space** dedicated to child care spaces cannot be more than 50% of the total space required.

FOOTNOTES (Section 13.6): ¹ For the purpose of calculating minimum densities the amount of commercial area considered as a unit will be measured at one (1) unit per 125 m ² of commercial GFA. ² The minimum density does not apply to MF1 zoned lots addressed on Cadder Avenue between Richter Street and Ethel Street. ³ For lots in the TS1 zone with vehicle access only from Lakeshore Road, the minimum lot area is 2750 m ² . ⁴ For lots with the Rental Only subzone, the base FAR is increased by 0.3 FAR. ⁵ If eighty percent (80%) of the parking provided on-site is located underground (below finished grade) then the base FAR is increased by 0.25 FAR. ⁶ If a parkade entrance / exit has a lower finished grade than the surrounding area then this portion of the parkade can be excluded from height calculations. ⁷ The base height is 18.0 m & 4 storeys except the maximum base height is 22.0 m / 6 storeys if the subject property is fronting onto a Transit Supportive Corridor. ⁸ The maximum height of Duplex Housing, Semi-Detached Housing, Single Detached Housing, and Townhouses is 11.0 m & 3 storeys. ⁹ The base FARs are derived from the base height regulation. Therefore, the base FARs remain constant even if an owner successfully applies for a Development Variance Permit to the base heights.

Min. Accessory Buildings / Structures Setbacks	An accessory building or structure shall follow the setbacks within that zone except the setback shall not be less than 1.6 m when abutting a urban residential or rural residential zone.								
Upper Floor Setbacks	For any portion of a building abutting a street or abutting another property, a 3.0 m setback is required for any portion of the building above the lesser of 16.0 m or four storeys.								
Corner Lots	For any building greater than 18.0 m or 4 storeys and located on a corner lot, there shall be a triangular setback 4.5 m in length along the lot lines that meet at each corner of an intersection. This setback will only be required at the first storey. See Visual Example of Corner Lot Setbacks.								
Urban Plazas	Any site within an urban centre larger than 4,000 m² with a building length larger than 100 m shall provide an urban plaza at grade.								
Tall Building Regulations	For tower and podium regulations refer to Section 9.11 Tall Building Regulations.								
Min. and Max. Commercial or Residential Floor Area based on Fronting Street Type	The commercial and residential principal use floor area restriction is based on street type as defined in the City of Kelowna’s Official Community Plan (See Maps: 4.2 Downtown, 4.4 Capri-Landmark, 4.6 Pandosy, 4.8 Rutland, & 4.10 Midtown). Secondary uses are permitted in accordance with Section 14.9. Any building on streets classified as a: High Streets or Retail Streets shall provide ground-floor commercial principal uses, which must occupy a minimum of 90% of the street frontages. Access driveways or other portions of the street frontage not used as a building will not be considered for the purpose of this calculation. Any combination of commercial and residential principal uses is permitted above the ground-floor.

	- Mixed Streets can contain any combination of commercial and residential principal uses at the ground floor and above. - Mixed Residential Streets can contain any combination of ground-floor commercial or residential principal uses. One hundred percent (100%) of the floor area above the ground-floor shall be residential principal uses. - Residential Streets shall contain one hundred percent (100%) of the floor area as residential principal uses.								
Max. Parkade Exposure	On the first floor, there shall be no parkade exposure to the primary street and the secondary street may have up to 25% of that frontage (access driveways will not be considered as exposure).								
Min. Riparian Management Area and Trail width	Any lot with three or more dwelling units that is abutting a watercourse or a riparian area must have the Minimum Riparian Management Area (RMA) , as described in Table 21.1 of the OCP dedicated to the City. If the lot is abutting a trail identified in Map 10.1 of the OCP then five additional metres must be dedicated to the City for trail connections in addition to the minimum RMA .								
FOOTNOTES (Section 14.11):									
.1 The minimum setback for ground-oriented, residential units can be reduced to 2.0 metres if both criteria are met: a) The maximum height of the first storey floor above adjacent curb level for ground-oriented residential units is 1.2 m. Height is measured from the grade at the sidewalk directly from a fronting publicly accessible street, walkway, open space or applicable lot line. See Example Diagram Figure 5.12. b) The minimum net floor area for ground-oriented, residential units on the first floor is 11 m². See Example Diagram Figure 5.13. .2 The minimum setback can be reduced from 3.0 m to 0.0 m for any portion of a building below 16.0 m in height if the ground floor setback (measured from back-of-curb or edge of road pavement in situations without curb to building face) of at least 6.0 m in the UC2, UC3, UC4 zones and 4.5 m in the UC5 zone. .3 Except it is 3.0 m when the lot is on Conlin Ct, Lowe Ct, or Bouvette St. The side yard setback is 3.0 metres when the lot is abutting a Core Area Neighbourhood (C-NHD), Suburban - Residential (S-RES), Suburban - Multiple Unit (S-MU), or an Education / Institutional (EDINST) future land use designation as outlined in the Official Community Plan. .4 Except it is 6.0 m when abutting a core area neighbourhood (C-NHD) or an education / institutional (EDINST) future land use designation as outlined in the Official Community Plan. .5 Except the rear setback is: 3.0 m when abutting a rear lane, 6.0 m when abutting a single & two dwelling zone or rural residential zone, and it is 6.0 m for hotels or motels. .6 The minimum side yard is 4.0 m when abutting a single & two dwelling zone or rural residential zone. .7 For portions of a parkade with lane access which do not project more than 2.3 m above finished grade, the rear yard setback for the parkade is 1.5 m. The site rear yard for carport structures is 1.5 m.

.8	Any building over 6 storeys in height , the portions of the building over 6 storeys must be setback a minimum of 10 m from any lot line abutting any single & two dwelling zone or rural residential zone . Bareland strata lots do not have setbacks to internal lots or common access roads. A continuous building frontage shall not exceed 100 m in length and must be designed with appropriate architectural breaks or relief where the length of the building exceeds 37 m.								
.9	The maximum site coverage of all buildings, structures , and impermeable surfaces is dependent on the street type as defined in the City of Kelowna's Official Community Plan (e.g. Map 4.4, 4.6, 4.8, 4.10). All high streets, retail streets, and mixed streets are maximum of 100%. All mixed-residential, residential streets and all other street types are maximum of 90%.								
.10	The maximum height is measured from the grade at the sidewalk directly from a fronting publicly accessible street , walkway, open space or applicable lot line . See Visual Example of Max Floor Height for Residential Ground-Oriented Housing .								
.11	A minimum of 4.0 m ² per dwelling unit of the Common and Private Amenity Space shall be configured as common area that is accessible to all residents and must not be located within the required setback areas. Common and Private Amenity Space can be devoted to child care centres as long as the child care spaces have direct access to open space and play areas within the lot. The amount of Common and Private Amenity Space dedicated to child care spaces cannot be more than 50% of the total space required. Any apartment building with 25 or more dwelling units must have at least 75 m ² of the required common area configured indoors.								
.12	The setback for a garage, a carport , or a parkade door that has direct access to the street shall have a 6 m setback measured from back-of-curb or edge of road pavement, or edge of sidewalk or 4.5 m from lot line (whichever is greater).								
.13	The maximum site coverage is dependent on the street type as defined in the City of Kelowna's Official Community Plan (e.g., Map 4.4, 4.6, 4.8, 4.10). All high streets, retail streets, and mixed streets are maximum of 100%. All mixed-residential, residential streets and all other street types are maximum of 85%.								
.14	Minimum building setbacks only applies to buildings that are at least 5 storeys and not taller than 12 storeys with a building frontage greater than 60.0 m. The setback can occur on any floor above the first storey . The setback is required for 75% of the total area of the exterior wall along the building frontage. Eaves, decks , canopies , and balconies can project into the setback no greater than 0.6 meters.								
.15	If the development is 3 storeys or less and contains 6 or fewer dwelling units , then the MF1 Development Regulations apply.

FOOTNOTES (Section 14.14.):				
^{.1} The base FARs are derived from the base height regulation. Therefore, the base FARs remain constant even if an owner successfully applies for a Development Variance Permit or Board of Variance order to the base heights.				
^{.2} If a parkade entrance / exit has a lower finished grade than the surrounding area then this portion of the parkade can be excluded from height calculations.				
^{.3} For lots with the Rental Only subzone and include a residential use, the base FAR is increased by 0.3 FAR.				
^{.4} For the purpose of calculating minimum densities the amount of commercial area considered as a unit will be measured at 1 unit per 125 m² of commercial GFA.				
^{.5} The base FAR is adjusted to 3.5 and the maximum height is adjusted to 12 storeys & 39 metres only in situations where: a) the development is a hotel on a lot fronting a Provincial Highway that does not abut a lot that is zoned RR1, RR2, RU1, RU2, RU3, or RU5; or b) a primarily residential development is located within Map 8.3.c Orchard Park Exchange.				
^{.6} If eighty percent (80%) of the parking provided on-site is located underground (below finished grade) then the base FAR is increased by 0.25 FAR.				
^{.7} When referencing FAR and height regulations, the “areas” references are identified on Map 14.14.a Downtown Building Heights.				
^{.8} The Affordable Housing Bonus FAR is granted if the conditions outlined in Section 6.8 Density Bonus are satisfied.				
^{.9} The maximum height with Bonus FAR is granted in conjunction with Affordable Housing Bonus FAR (see footnote ^{.8} and Section 6.8 Density Bonus).				
^{.10} When referencing FAR and height regulations, the “areas” references are identified on Map 14.14.b Capri Landmark Building Heights.				
^{.11} When referencing FAR and height regulations, the “areas” references are identified on Map 14.14.c Midtown Building Heights.				
^{.12} Lots that have a 6 storey base height and are within a Transit Oriented Area identified by Map 8.3.b, Map 8.3.c, or Map 8.3.d have a base density of 2.5 FAR. Developments within the Transit Oriented Area that use this base density cannot apply the Underground Parking Base FAR Adjustment referenced in footnote ^{.6} . If a lot has a PARK building height category and is within a Transit Oriented Area identified by Map 8.3.b, Map 8.3.c, or Map 8.3.d, then the lot can be developed in accordance with the 12 storey density & height category if it is within 200 m of the Transit Exchange or in accordance with the 6 storey density & height category if it is between 200 m and 400 m of the transit exchange.

FOOTNOTES (Section 15.4.5):

^{.1} The density in the CD18 zone will be controlled in the form of a 219 Covenant registered on the remainder parcel(s), which will indicate a remainder buildable area equal to the total site density (271,500 m²) minus the already approved buildable area. The registered 219 Covenant will be amended, to reflect the remaining buildable area, as a condition of issuance of every development permit and as a condition of every subdivision approval. The approved buildable area will be determined by the:

(a) buildable area approved through all form & character development permits within the CD18 Areas, and

(b) for those lots not requiring a form & character Development Permit it will be through the subdivision approval process based on a calculation of 350 m² per unit. *For example: if there are 10 lots being approved and eight of those lots are for single detached housing and two of the lots are for semi-detached housing the calculation used to determine the buildable area would be 12x350 m² = 4,200 m².*

^{.2} The height measurements begin from the deck elevation. Supportive deck structures cannot exceed 7.0 m in height.

^{.3} Any building or structure in area I that exceed 6 storeys then any exposed storey where parking is provided within the building must include 60% of the exposed area as habitable space.

^{.4} Any building or structure in Areas II and IV that exceed 4 storeys then any exposed storey where parking is provided within the building must include 60% of the exposed area as habitable space.

^{.5} Except the setback shall be 1.5 m to the CD Zone boundary when that boundary is fronting the Okanagan Lake Riparian Management Area or any park areas.

^{.6} A minimum of 4.0 m² per dwelling unit of the Common and Private Amenity Space shall be configured as common area that is accessible to all residents and must not be located within the required setback areas.
