I hereby certify that the following is a true copy of By-law No. 2013-20 as enacted by the Council of the Corporation of the Township of Limerick on the 5th day of November, 2013.

Jennifer Trumble
Clerk-Treasurer, Township of Limerick

Following is a **"Statement of Intent"** endorsed by the Council of the Township of Limerick. Although it is included as guidance for Township Officials and Ratepayers alike, it does NOT constitute a part of the New Conforming By-laws as drafted and passed by Council on November 5th, 2013. Instead, it is hoped by Council that it will be effective in prompting better management practices for the use of shoreline properties throughout the Township.

SHORELINE BUFFERS

The Importance/Function of Shoreline Buffers

There are several benefits from buffers located along the land water interface of recreational lakes and rivers. These benefits include:

1. Protection of shoreline from wind and wave erosion
2. Reduction of contaminants from upland areas – sediment, nutrients, pesticides, herbicides, etc.
3. Control of nuisance wildlife (eg geese)
4. Provide wildlife habitat diversity and transition zone

Principles of Buffer Creation/Maintenance

- 1) Minimum depth of buffer 15 metres where possible – more is better
- 2) Buffer should extend into the lake (macrophytes) where practical
- 3) A minimum of 75% of the shoreline property width should be buffer
- 4) Water flow across the buffer, toward the lake or stream, should be diffused across the entire property and not concentrated in a channel
- 5) Disturbed shoreline areas should be revegetated with a mixture of native grasses, shrubs, and trees appropriate for site specific conditions
- 6) Maintain existing vegetation, and use selective pruning to allow "view corridors" rather than total vegetation removal
- 7) Native vegetation that can be maintained throughout any development process and occupancy should be selected for revegetation plans

Ideal Principles of Three Zone Buffer System

- 1) Zone 1 – area closest to the water should be a minimum 8 metres in depth and be vegetated with native trees and shrubs appropriate for site conditions
- 2) Zone 2 – the middle zone should be at least 15 metres in depth and contain managed forest
- 3) Zone 3 – the zone farthest from the water should be a minimum of 7 metres deep and consist primarily of maintained turfgrass, although woody vegetation is more desirable and is encouraged.

Uses Within Shoreline Buffer

- 1) Zone 1: Area closest to the water should be relatively undisturbed native vegetation. Uses to include footpaths, boat docks, etc
- 2) Zone 2: This area can support limited recreational uses such as wood chip trails within the view corridor. Tree maintenance (pruning, dead tree removal, and revegetation) is allowed.
- 3) Zone 3: Residential uses such as lawns, gardens, garden compost, or passive storm water management facilities such as infiltration trenches

Uses Strongly Discouraged or Prohibited Within the Buffer

- 1) Impervious cover
- 2) Septic tanks and weeping beds
- 3) Clear cutting
- 4) Structures other than a pump house or dock
- 5) Parking lots
- 6) Motorized vehicles
- 7) Grazing or livestock
- 8) Pesticide or fertilizer application
- 9) Storage or disposal of wastes

View Corridors

- 1) Clearing for a view corridor should be limited to no more than 12 metres at the lake or river bank, or a maximum of 25% of shoreline width, whichever is less
- 2) Clearing within the view corridor should retain 60% of basal area of trees
- 3) Shoreline access paths should wind through view corridor and be limited to a width of 3 metres: less is better
- 4) Pruning within the view corridor should be limited to 1/3 of tree height with no clearing of vegetation less than one metre in height
